

This report summarizes your outcomes in the PATH Lab Psilocybin Therapy Study through your 6-month follow-up.

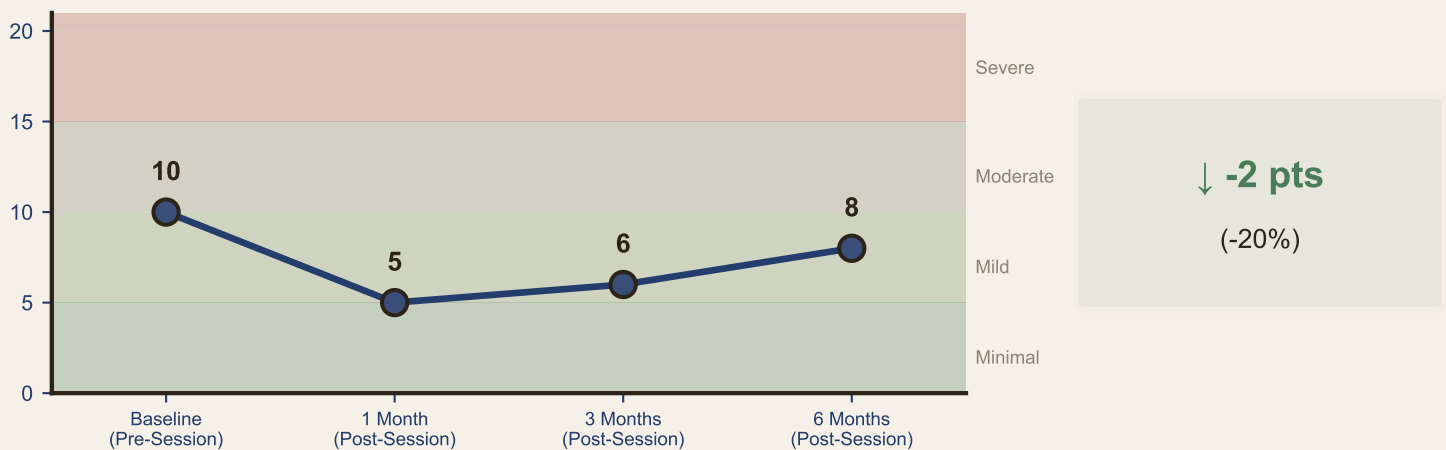

Wellbeing (WHO-5)

Depression Severity (PHQ-9)

Anxiety (GAD-7)

Thank you for your ongoing participation in our study. Your involvement helps us better understand how and for whom psychedelics work, as well as associated real-world benefits and risks.

Your acute dosing session experience, compared to published study norms. All scores are normalized to a 0–100 scale for comparison.

Acute Experience Measures

Normalized to 0–100 scale

As you continue to complete follow-up surveys, we will be able to share more about how your wellbeing, depression severity, and anxiety change over time. We are grateful for the time you dedicate to this research.
